

Java Competition 2025

Create a new Java Project in Eclipse

Step 1 Locate Eclipse

Eclipse is an Integrated Development Environment (IDE) that lets you write java code (program) and run and test your code. Follow the following steps Eclipse.

- 1) Go to Desktop, click a folder Java Competition
- 2) Choose Eclipse IDE
- 3) Click icon Eclipse for Java and open the Eclipse IDE

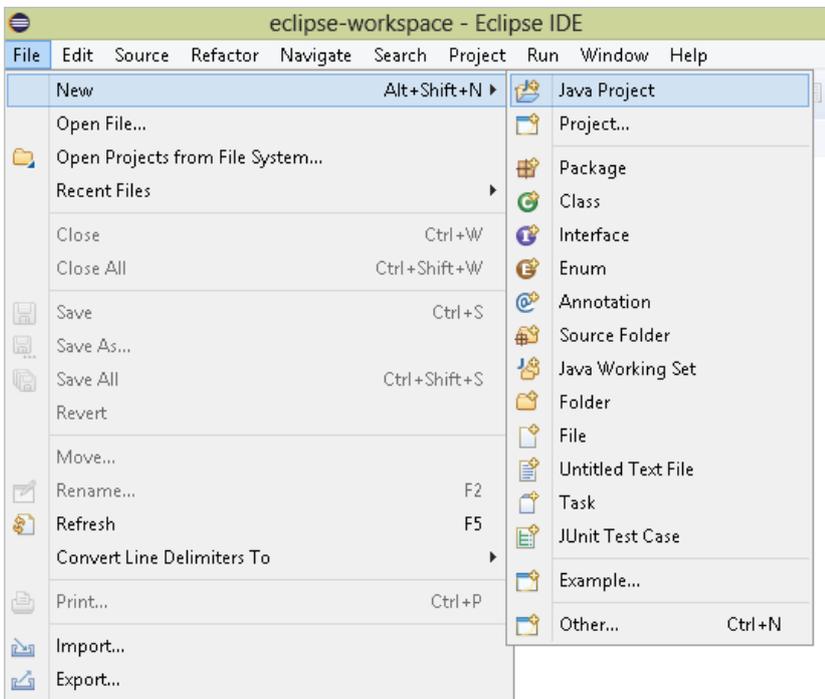

- 5) Click "Launch"

Step 2 – Create a new java Project

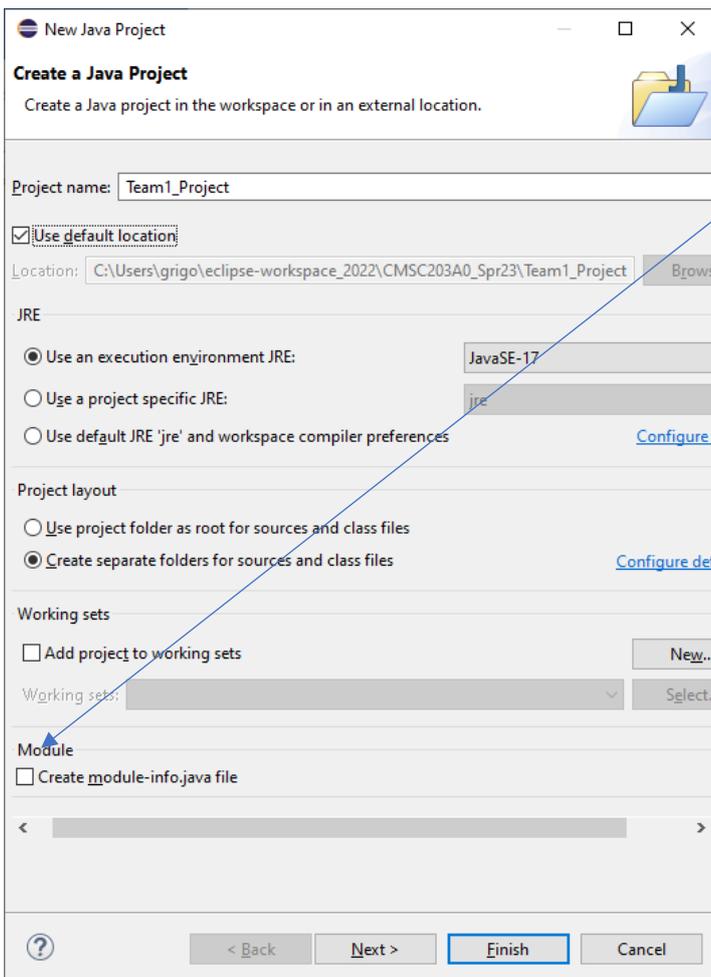

To create a new Java Project, follow these steps:

- 1) Click on File -> New -> Java project.

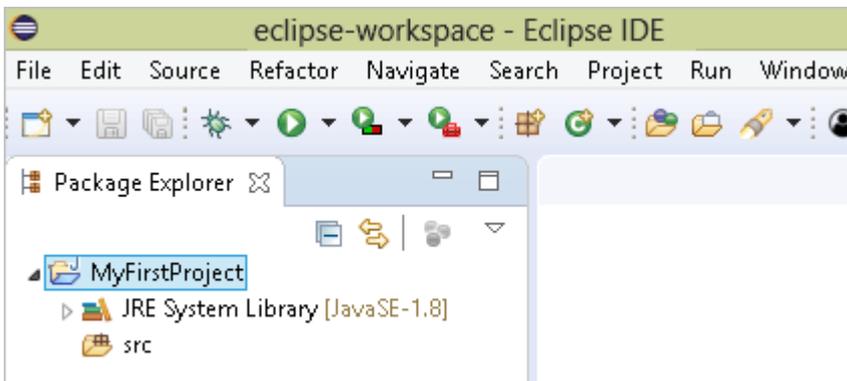

2) The following window will open:

Give a name to your project in the highlighted text field. Name your project as “Team1Project” and leave the rest of the fields as default and click **Finish**. **Make sure uncheck “Module” checkbox.**

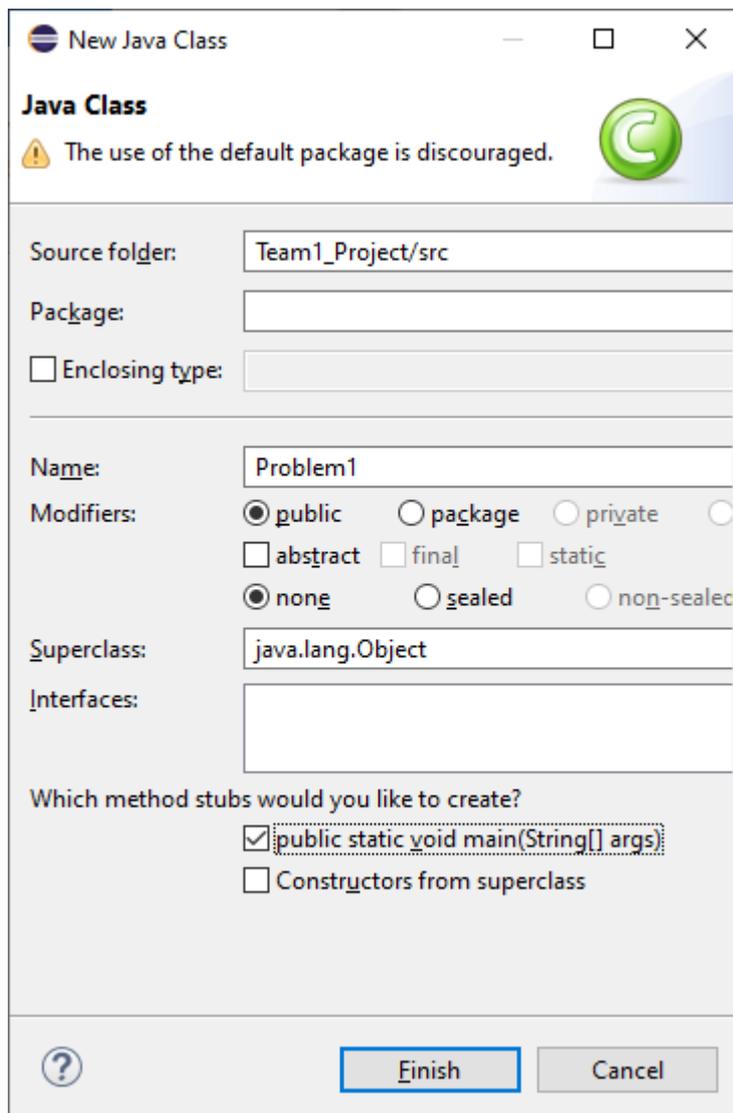

You will see the following structure created in your project explorer.

Here you can see two sub-items under your project name. The JRE system library is the default Java library that Eclipse adds to your project. This library provides Java support and without this, you cannot proceed with creating a Java project. The other folder is the “src” folder or the source folder. Your project structure will get created inside this.

3) Right click on the Team1Project, then select New ->Class.

Type the name of the program as **Problem1** as follows and click on Finish button.

4) Type your program and save it.

```
public class MyFirstClass {  
    public static void main(String[] args) {  
        System.out.println("This is my first program!");  
    }  
}
```
